

CARZONE

Case Study

App & Web Development

ABOUT

CarZone is a car trading platform designed for the Swiss market. It allows buyers to browse, lease, and purchase cars with a TikTok-style video experience, while sellers can list, manage, and quick-sell cars directly to dealers.

Project
App & Web Development

Timeline
4 months

Industry
Automobile Marketplace

PROBLEM STATEMENT

Existing car listing platforms were cluttered, lacked transparency in leasing, and did not provide interactive experiences like video reels or dealer quick-sales. Sellers faced high listing costs, and buyers lacked leasing clarity.

SOLUTION

CarZone provides an all-in-one digital solution for the automotive industry, enabling users to easily buy, sell, and lease cars while offering dealers tools for quick sales, listing management, and customer engagement.

GOALS

- Simplify car buying & selling flows.
- Integrate leasing with transparent breakdowns.
- Enable TikTok-style video reels (CarReels).
- Offer a fast-sale feature for dealers.
- Provide a subscription-based seller listing model.

UNIQUE FEATURES

- TikTok-style CarReels for car browsing
- Quick Sell feature – sellers get instant dealer offers
- In-app chat between buyers & sellers

- Leasing calculator with multiple interest options
- Transparent slot-based pricing model for listings

STRATEGY

Delivered a seamless, scalable, and monetizable car marketplace by combining intuitive design, robust technology, and clear business models.

User-Centric Design

Focused on creating an intuitive app & web experience with simple navigation and engaging features like reels and quick sales.

Scalable Technology

Built a robust backend to handle high volumes of listings, chats, and payments with seamless performance.

Business Model Integration

Implemented subscription-based listings and dealer-focused tools to ensure monetization and long-term growth.

Roadmap

Step-by-step plan to achieve project goals

UI UX Design (figma)

App Development (flutter)

Backend (node.js)

1. Research & Design

2. Development

3. Testing & QA

4. Launch

Visual Walkthrough

"The Buyer's Home Screen was crafted to showcase car listings in a clean, scrollable view with smart filter options. This allows users to quickly narrow down choices and find their ideal car with ease."

"A unified login flow was designed to let users seamlessly choose between Buyer and Seller modes. This ensured clarity, reduced confusion, and provided role-based access for a smoother onboarding experience."

"The Buyer-Seller Chat Screen enables seamless communication within the app, allowing users to negotiate, share details, and finalize deals without switching platforms."

"The Seller Profile & Settings screen enables sellers to manage account details, payment information, listings, and Slots Request for smooth selling operations."

"The Listing Plan & Pricing screen provides sellers with clear options to manage their listings, offering both individual and package-based plans for flexibility and ease of use."

Thanks For Scrolling
